About Maple Syrup:

- Maple sap is harvested from the native maple forests of the Northeastern United States and Eastern Canada.
- 100% Pure Maple Syrup is made exclusively by the evaporation of maple sap.
- "Maple Sugaring" occurs in the spring generally between February and April. The best sap flows are generated from cold nights and warm days. A "sugarbush" takes 40 years to reach productive size from seedlings. Many trees can be tapped for years or even centuries.
