

DATA SHEET OF IBARRA CHILLI PEPPERS

• DEFINITION AND CHARACTERISTICS OF THE PRODUCT:

The chilli peppers are harvested, selected and sold bottled as white wine vinegar preserves in accordance with the technical stipulations established by the Basque Food Quality Label.

The bottled chilli peppers meet the following requirements:

- Narrow and long fruit, which is whole and firm, round-sectioned and with a flesh thickness that is typical of the variety.
- An even and slightly shiny yellowish-green colour.
- Sharp and slightly curved tip.
- Full, fine and long stem.
- Fine and full skin.
- Tender texture.
- Fresh and not very rough looking appearance.
- Length of the edible part, between 5 and 12cm.
- They should be healthy and free from: odour and strange tastes, damage caused by cold, tearing or attack, cracks, disease, rot, brown stains, alterations to the pulp, foreign substances, injuries and roughness caused by cold and hail, non-scarred injuries and sunburn.
- Each jar should contain even-sized chilli peppers. The maximum difference in length between chilli peppers in each jar should be no more than 3cm.

With the exception of length, a maximum 5% deviation in all the chilli peppers that meet the required quality standards is allowed in any one jar. As regards length, and in addition to the previously mentioned variation, the chilli peppers may vary by a maximum of up to 10% of the stipulated size.

The covering liquid in which the final product should be bottled must meet the following requirements:

- The base component of the covering liquid is diluted wine vinegar.
- The PH of the liquid should be between 3.3 and 3.6.
- Maximum salt content of 10gr of salt per litre.

Since the product is acid-pickled given the use of wine-based vinegar as a covering liquid:

- The concentration in sugars measured in degrees Brix should be between 3.5 and 4.5.
- The inside of the jars must be clean prior to the chilli peppers being bottled and the covering liquid must be free from any foreign substances, soil or impurities.
- The jar must be hermetically sealed before being sold.

- **DELIMITATION OF PRODUCTION AND PACKING AREAS:**

The chilli peppers must be grown in the Atlantic area of the Basque Country, with real evapotranspiration (Thornthwaite) equal to or above 585 mm and with mild minimum temperatures in winter (not too low) and mild maximum temperatures in summer (not too high) corresponding to a mild climate, thus allowing the chilli peppers to grow in the quality conditions referred to earlier.

To ensure the most suitable climate for the crop, the chilli peppers should not be grown at a height of more than 450 metres above sea level.

The product must be bottled in the Basque Country.
